

5 SIGNS YOUR BUSINESS NEEDS ERP

1 Lots of Software "Solutions"

Accounts receivable, accounts payable sales, fulfillment, receiving... are all of these processes run through separate systems?

How many hours do your employees spend manually entering duplicate data?

How much time and money is your company losing to these inefficient redundant "solutions"?

ERP software has the power to integrate all of these processes so that accurate real time data is stored in a single system

2 Data Silos: Information Isn't Easily Accessible

Can you easily find important business data or even basic metrics?

Do different departments have access to the same up to the minute information?

Erp ensures that executives have access to holistic, real time metrics on-demand. Departments can share appropriate information as needed because its all stored on the same database

3 A Struggling IT Department

Is your IT department overwhelmed trying to customize, integrate and maintain multiple redundant systems?

If your business is feeling this sort of IT strain, it's probably time to invest in an ERP system

4 Weak Business Processes

Are any business processes lacking consistency or efficiency?

Are you following best practices regularly?

Are you struggling with stock outs or too much excess inventory?

Is your accounting department manually entering invoices and orders into various systems?

ERP offers complete control and efficiency across all business processes

5 Growth on the Horizon

Is there potential for rapid growth in your industry?

Even if your company isn't experiencing the above pain points to a critical degree, rapid growth can easily antagonize business ailments and hinder a company at a critical time of growth.

ERP means scalability. It means putting a solid foundational infrastructure in place for much larger operations.
